Summary

Early-career software engineer with experience designing and implementing Java-based curricula and custom lesson plans, fostering collaborative problem-solving. Proficient in C++, Java, Python, and C, with solid knowledge of data structures, algorithms, and Linux environments. Hands-on with Git, NodeJS, and PSQL, eager to contribute to low-latency, high-throughput data pipelines and back-testing tools in a quantitative trading setting.

EDUCATION

University of Maryland, College Park

Aug 2021 - May 2025

Bachelor of Science, Computer Science

- **Coursework:** Object-Oriented Prog I/II, C Programming, Discrete Structures, Organization of Programming Languages, Algorithms, Database Design, Programming Handheld Systems, Game Programming, Intro to Human Computer Interactions, Introduction to Parallel Computing, Web Application Development

SKILLS

- **Programming Languages:** Java, C, Ruby, PSQL, Python, Kotlin, Javascript, Ocaml, Swift, C#, C++, Rust
- **Frameworks and Tools:** Git, Express, NodeJS
- **Platforms and Concepts:** Linux, Windows environments, Data Structures

EXPERIENCE

The Coder School

May 2020 - Aug 2020

Coding Instructor Intern

Yorba Linda, CA

- Led engaging teaching sessions for high school students preparing for the AP Computer Science exam, covering foundational Java concepts and core data structures.
- Developed customized lesson plans in Java and Rust to enhance student understanding and confidence in programming fundamentals.
- Fostered a collaborative learning environment by introducing Git-based workflows, encouraging students to explore problem-solving techniques and critical thinking skills.

PROJECTS

KeepItBurning Game

2025

- Ranked #8 overall in Alberta Slow Jam #3, demonstrating strong technical execution and creative interpretation of the theme 'Branching out.'
- Built a 2D survival game in Godot (GDScript) during a 2-week game jam, focused on exploration, resource gathering, and lasting as long as possible.
- Created dynamic survival mechanics-including environmental hazards and increasing difficulty-to keep gameplay tense and replayable.

Anim Blitz Game

2025

- Developed AnimBlitz, a competitive multiplayer battler on Roblox featuring unique characters, strategic combat, and progression systems.
- Engineered scalable gameplay frameworks in Lua using Roblox Studio, supporting character collection, abilities, combat flow, status effects, and long-term player progression.
- Implemented a secure client-server architecture for synchronized multiplayer gameplay and exploit prevention.

Ecommerce Portal

2024

- Developed a full-stack e-commerce application using JavaScript, Express, and Node.js, enabling users to browse, save, and purchase products.
- Integrated MongoDB for storing user data and product information, providing efficient user-specific product saves and retrievals.
- Implemented secure authentication to track users' saved products for future purchases, enhancing user experience.
- Developed a streamlined payment process with product checkout.

OpenDiary App

2023

- Developed an Android app using Android Studio, designed for high school and college-age users to submit anonymous confessions.
- Implemented secure user authentication using Firebase Authentication, engineered a responsive and intuitive UI to enhance user experience, and integrated real-time data synchronization with Firebase Realtime Database, allowing immediate updates to the confession feed.
